Ubuntu Onboarding — Monitoring the CPU

A short note for new machines: how our team keeps an eye on CPU load.

Installing the CPU monitor

We standardised on **htop** for watching CPU and memory load from one interactive screen. Install it from the Ubuntu archive:

```
sudo apt install -y htop
```

> ⚠ **Important:** You must first stop the OpenVPN service; this step is required before the installation will work.

Once installed, run `htop` and press `1` for the live per-core CPU view.
